

ASPIRE™

Study for Spinal Cord Injury

Assessing non-invasive spinal stimulation and PT/OT for motor improvement response with ExaStim®

You may qualify to join a clinical study using ExaStim, an investigational non-surgical, non-invasive, spinal stimulation system.

The ASPIRE study will soon be enrolling participants who:

Age

Are at least 22 years of age at the time of the screening

Injury

Have a traumatic, chronic* spinal cord injury between C2 and T2

Function

Have limited function of upper extremities

Participation

Are able to adhere to 13 consecutive weeks of study participation

ABOUT US

ANEUVO® is developing revolutionary bioelectronic medicine to dramatically improve the quality of human life with solutions to treat injuries and diseases incurable through conventional medical treatment.
